

Worksheet Dinosaur egg

What do you need?

Not an Easter egg but a Dino egg!

- A small dino (e.g. from Action) 2-4cm
- Transparent glue
- Borax (available from e.g. bol.com)
- Water
- A bowl for mixing

Step 1

Put 2 tablespoons of warm water and 1 tablespoon of borax powder in a bowl.

Stir everything well until the borax powder dissolves.

If it doesn't dissolve completely, you can add a little more water.

Step 2

Now add 2 tablespoons of glue to your mixture.

Wait for about 10 seconds before stirring.

Step 3

Stir together very well until everything is mixed.

Now take the mixture out of the bowl with your hands and try to make a ball out of it.

Choose a dinosaur and push it into the ball.

The egg will be very sticky and slimy at first, but as you keep kneading and rolling, this will become less sticky and more firm.

Step 4

Tadaaa!
Your very own
Dinosaur egg!
